GAYATRI CHOPADE

Pune, MH | +91 7666047068 | gschopade123@gmail.com | linkedin.com/in/gayatri-chopade-550703165 | github.com/Gayatrichopade

PROFESSIONAL SUMMARY

Data Science and Analytics Engineer with 4+ years of experience delivering machine learning, BI automation, manufacturing analytics, and enterprise workflow solutions. Skilled in Python, SQL, Power BI, Databricks, PySpark, Power Platform, and GenAI-enabled analytics. Proven ability to translate business problems into scalable data products, improve operational efficiency, reduce cost, and communicate insights to engineering and business stakeholders.

CORE STRENGTHS

Data Science & AI	Manufacturing Analytics	Business Automation
Python, SQL, ML modeling, feature engineering, model evaluation, GenAI analytics, and recommendation systems.	Manufacturing KPIs, production analysis, SAP/enterprise data exposure, operational dashboards, and decision support.	Power BI, Power Apps, Power Automate, SharePoint, process visibility, approval tracking, and stakeholder reporting.

PROFESSIONAL EXPERIENCE

John Deere | Senior Engineer **-** Data Science & Analytics — Pune, MH **|** Current Role

Focus: Manufacturing analytics, AI/ML solutions, production sequencing, BI, automation, and enterprise data integration

Summary: Working as a Senior Engineer supporting John Deere manufacturing analytics, AI/ML solutions, production sequencing, Power BI reporting, data automation, and enterprise analytics initiatives. Partnering with business stakeholders to deliver scalable data-driven solutions that improve operational efficiency, operational visibility, decision-making, and digital transformation across manufacturing processes.

- Delivering data science and analytics solutions for **manufacturing, production, and business improvement** use cases using Python, SQL, Power BI, Databricks, and enterprise data sources.
- Working on AI-driven manufacturing initiatives including **production sequencing, constraint learning, recommendation logic, and explainable analytics** to support operational decision-making.
- Building and enhancing **Power BI dashboards and KPI views** for leadership visibility, process monitoring, performance tracking, and faster business decisions.
- Developing and optimizing **SQL datasets and data pipelines** to retrieve, join, transform, and prepare large enterprise data for BI and advanced analytics.
- Automating processes through **Power Apps, Power Automate, SharePoint**, and workflow design to improve approval tracking, user engagement, and process governance.
- Collaborating with cross-functional stakeholders to understand requirements, convert problem statements into analytics solutions, and communicate measurable outcomes.

HCLTech | Senior Software Engineer **-** Data Scientist — Pune, MH **|** Jun 2021 - Present

Client engagements: Facebook and John Deere

Summary: Worked as a data scientist across client engagements, delivering ML models, BI dashboards, SQL data preparation, Python automation, and Power Platform solutions for measurable business improvement.

- Developed and implemented **machine learning models** with new features that reduced processing time by **20%**.
- Executed stress prediction using a predictive model with **87% accuracy** using **XGBoostClassifier**; performed data exploration, data cleaning, feature engineering, transformation, and classification-matrix-based evaluation.
- Built a regression model with **83% accuracy** to predict required time for a set of actions using **LightGBM Regressor** and feature expansion through dummy variables.
- Compiled **Python scripts** for business problems on demand, contributing to an estimated **42K cost reduction per product**.
- Created multiple **Power BI dashboards** and used **Power Apps, Power Automate, and SharePoint**, increasing user engagement by **27%**.
- Created optimized **SQL queries** to join and retrieve data from multiple tables for Power BI dashboards, improving large-data retrieval time by **20%**.
- Analyzed and developed BI reports that optimized efficiency by **35%** and helped leaders manage teams.
- Handled **5+ simultaneous projects**, delivered successfully on time, interviewed candidates, and trained colleagues in batches of **40+ attendees**.

PROJECT EXPERIENCE

Project / Area	What I Delivered	Tools / Methods
John Deere Manufacturing Analytics	Built analytics layers, operational dashboards, KPI views, and SQL transformations to support production-oriented decision-making.	Power BI, SQL, Python
AI-Driven Production Sequencing	Developed analytics thinking for	Python, ML, Optimization, GenAI

	sequencing, constraint generation, recommendation outputs, and explainable decision support.	
Workflow Automation	Designed low-code tools connecting user inputs, SharePoint records, and automated notifications for better process governance.	Power Apps, Power Automate, SharePoint
ML Prediction Solutions	Created supervised ML models for prediction use cases with feature engineering, accuracy tracking, and performance analysis.	Python, XGBoost, LightGBM, EDA

TECHNICAL SKILLS

Programming & Data	Python, SQL, PySpark, Databricks, data cleaning, feature engineering, model evaluation
Machine Learning / AI	Classification, regression, XGBoost, LightGBM, deep learning foundations, GenAI analytics, recommendation systems
BI & Visualization	Power BI, dashboard design, KPI reporting, data visualization, stakeholder-ready storytelling
Automation & Platforms	Power Apps, Power Automate, SharePoint, SAP/enterprise data integration exposure
Professional Strengths	Analytical thinking, productivity improvement, cost reduction, time management, learning agility, coaching and interviewing

EDUCATION

- **Post Graduation Diploma in Big Data Analytics |** CDAC Noida **|** Jan 2021
- **Bachelor's in Engineering - Computer Science |** SSJCOE, Mumbai University **|** Jun 2019

CERTIFICATIONS

- **Machine Learning, Data Science and Generative AI with Python** - Udemy
